# NATURAL LANGUAGES

In neuropsychology, linguistics, and philosophy of [language](#), a natural [language](#) or ordinary [language](#) is any [language](#) that occurs naturally in a [human](#) community by a process of use, repetition, and change without conscious planning or premeditation. It can take different forms, namely either a spoken [language](#) or a sign [language](#). Natural languages are distinguished from constructed and formal languages [such](#) as those used to program computers or to study logic.

All varieties of world languages are natural languages, including those that are associated with linguistic prescriptivism or [language](#) regulation. (Nonstandard dialects can [be](#) viewed as a wild type in comparison with standard languages.) An official [language](#) with a regulating academy [such](#) as Standard French, overseen by the Académie Française, is classified as a natural [language](#) (e.g. in the field of natural [language](#) processing), as its prescriptive aspects [do](#) not make it constructed enough to [be](#) a constructed [language](#) or controlled enough to [be](#) a controlled natural [language](#).

- [English Language](#)
- [Hindi language](#)
- [Sanskrit language](#)
- [Greek language](#)
- [Latin language](#)
- [German language](#)
- [Chinese language](#)
- [Japanese language](#)
- [Russian language](#)
- [Tibetan language](#)
- [Hinglish language](#)
