SCIENCE (scientia)

- **SCIENCE (scientia)**
 - Typical divisions of science include:
 - **scientiarum naturalium (natural sciences)** the use of the scientific method to study the universe
 - **vita scientiarum (life sciences)**
 - **physica scientia (physical sciences)**
 - Physics
 - Chemistry
 - Astronomy
 - Earth science
 - **applicatas scientias (applied sciences)** the study of technology
 - **socialium (social sciences)** the use of the scientific method to study society
 - In addition, when used more generally by ignoring the testability requirement:
 - **formal scientia (formal sciences)** the study of rules, logic, and formal systems of information
- **scientific terminology**
 - **indefinite terminology**
 - **Definite terminology**
 - Numerical terminology
- Differences related to meaning
- differences related to context
- Differences related to interpretation
- Differences related to representation

STUDY

- Concerned with the field of study associated with essence
 - Natural sciences
 - Physical sciences
- Concerned with the **person** studying
 - Teacher
 - student
- Concerned with nature of structures
 - Concrete Science , physical sciences , natural sciences
 - Abstract Science , formal sciences , psychology
- Science whether
 - Applied Sciences
 - Fundamental , basic sciences
- Combining the both structure to function relations
 - Anatomy , biochemistry , histology , cytology , genetic structure
 - physiology , Biochemical processes , genetic process , cellular physiology , tissue physiology
